Art Unit: 2862

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 11-14 and 23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Guckel et al.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-10, 15-22 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guckel et al in view of Penney, Jr.

Guckel discloses all of the claimed subject matter except for the specific details of the solder joints as recited in claims 4-10, the specific details of the reference coil, the screening, the damping element and the placement of the electronic element. Penny teaches providing a screening for a sensor coil. It would have been obvious to provide a screening as claimed to the

sensor of Guckel in view of the teaching of Penney. The specific details of the solder joints, the specific details of the reference coil, the damping element and the placement of the electronic element are considered obvious design considerations will within the capabilities of one skilled in the art.
